(54) RAKE RECEPTION METHOD FOR SPREAD SPECTRUM SIGNAL

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain space diversity effect and path diversity effect efficiently with a smaller scale than here to fore in the rake reception method for a spread spectrum signal through the use of pluralities of antennas.

SOLUTION: Without adopting fixed connection among pluralities of reception antennas 10, 20 and finger sections #1-#8, connection of an antenna output with respect to each finger section is selected depending on a reception state for each multipath propagation path in each antenna branch to control the selection of a finger section being an object of rake synthesis. Furthermore, finger sections whose reception state does not satisfy a prescribed condition are excluded from the object of rake synthesis.

LEGAL STATUS

[Date of request for examination] 11.09.1997

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than
the examiner's decision of rejection or
application converted registration]

[Date of final disposal for application]

[Patent number] 3095065

[Date of registration] 04.08.2000
